

Selected Region: West Europe

For this project, the region west europe was selected for deploying cloud resources. West Europe is one of Microsoft primary Azure regions and it provides high availability, scalability, and reliable performance for applications and services hosted in Azure, it has strong infrastructure with high reliability and uptime, Low latency for users and services operating within europe, supports a wide range of Azure services and features, backed by Microsoft global network and security standards and is suitable for disaster recovery and business continuity planning when paired with another Azure region.
